

**IEEE Virtual Workshop on
Re-engineering Research in Engineering and Technology
during post-covid 19**

organized by

**IEEE Consumer Electronics & Broadcast Technology Chapter,
UK & Ireland**

**IEEE Technology & Engineering Management Society Chapter,
UK & Ireland**

In collaboration with Society for Information Organization, India

**Date: 15th July 2021
Virtual
Time: 1.00PM - 3.00PM**

In the era of COVID-19 pandemic, research activities are crippled in various domains and biomedical research is one of the fewer areas where the research is not much damaged. This standstill will likely continue in the short-term, the research work is expected to be affected many ways including funding flow, physical presence in laboratories, data analysis and synthesis by group, supply of research materials and equipment and also the termination of contracts to control expenses. This workshop looks at the short-term as well as the long-term stress in the engineering and technology research as well as long-term impacts of the weak project pipeline for the entire domains.

Topics covered in this workshop:

- Potential long-term impact on laboratories and universities
- Key questions that need to be addressed in post-pandemic
- Practical next steps , how to balance the research

Key contact

Professor EzenduAriwa

Chair, IEEE Consumer Electronics Chapter, UK & Ireland

Dr.SiddappaChandrappa
